Description :

Prsentation de l'diteur
Reflecting the recent increased public awareness of the topic, this is the first and most comprehensive resource for over a decade on the molecular basis, prevalence, treatment options, socioeconomic impact and prevention strategies of FADS. Edited by world-renowned experts, this compendium includes the latest research results to provide new insights and realistic estimations of FADS frequencies in Western communities. An invaluable resource for every professional dealing with the diagnosis, prevention and treatment of FADS, from researchers via health professionals to social workers.
Revue de presse
"This is a unique and comprehensive review of a significant health problem in the United States and around the world. The Canadian experts have reviewed all aspects of the problem and produced a reference that will serve as a guide to future health policy and research, both molecular and

social. The personal descriptions by two very empathetic individuals of the effects of this disorder on their lives make the book even more appealing."
